Software Developer

Lahore, Pakistan | furqan24ali@gmail.com | +92 370 0190949

LinkedIn: linkedin.com/in/furqan24ali

GitHub: github.com/FurqanAlyy

OBJECTIVE

Computer Science student with hands-on experience in building full-stack applications using Next.js, React, and MongoDB, seeking an entry-level developer role to apply technical skills and contribute to real-world projects.

TECHNICAL SKILLS

Languages: Javascript, Python, C++

Frontend: React.js, Next.js, Tailwind CSS, Material UI, Redux Toolkit

Backend: Node.js, Express.js, REST APIs, JWT Authentication, Middleware

Database: MongoDB, Mongoose ODM, Firebase

Tools & Infra: Git, GitHub, Postman, VS Code, Vercel, npm

AI Integration: Google Gemini API, Prompt Engineering, AI-powered feature development

EDUCATION

- Bachelor of Science in Computer Science (BSCS)** | 6th Semester 2023 – Present |
University of Central Punjab, Lahore, Pakistan
- Intermediate (HSSC) – Higher Secondary School Certificate** | 2021 – 2023 |
Board of Intermediate and Secondary Education, Lahore
Punjab Group of Colleges, Lahore

CERTIFICATIONS

- Build a Website on Google Cloud Skill Badge Issued by [Google Cloud](#)**
[Certificate Link](#)
- Prompt Design in Vertex AI Skill Badge Issued by [Google Cloud](#)**
[Certificate Link](#)

PROJECTS

Prepify AI — AI-Powered Interview Preparation Platform | MERN Stack, Google Gemini, Zustand, Tailwind CSS, JWT

- Built a full-stack AI interview prep platform on the MERN stack with Google Gemini 2.5 Flash, enabling users to upload resumes, paste job descriptions, and receive AI-driven match scores, tailored interview questions, ATS feedback, and progress analytics.
- Developed a resume-to-job match analyzer that parses PDF/DOCX resumes, extracts skills via parallel Gemini calls, and computes a weighted match score combining Jaccard similarity with AI-evaluated semantic fit, returning matched/missing skills and personalized recommendations.
- Engineered an interactive interview module that generates 5–20 tailored questions by category (behavioral, technical, situational) and difficulty, then evaluates user answers across clarity, relevance, and depth (1–10 scale) with AI-generated feedback and improvement tips.
- Designed an ATS optimizer scoring resumes across 6 categories (sections, action verbs, quantification, keywords, contact, length) using a hybrid of regex-based heuristics and parallel Gemini analysis to surface severity-ranked issues and ordered suggestions.
- Implemented an analytics dashboard with score trends, topic mastery radar, weekly activity charts (Recharts), and AI-powered coaching for weak areas — backed by JWT authentication, Zod validation, and a layered Express architecture (routes → controllers → services → models).
- Deployed frontend on Vercel and backend on Railway. [\[https://prepify-ai-omega.vercel.app/\]](https://prepify-ai-omega.vercel.app/)

QASAF — Full-Stack E-Commerce Platform | Next.js, MongoDB, Tailwind CSS, Zustand, JWT, Cloudinary

- Architected a production-grade e-commerce platform on Next.js App Router with 25+ REST endpoints, combining server components for SEO-critical pages with client components for interactive features, deployed on Vercel with MongoDB Atlas and Cloudinary CDN.

- Implemented secure JWT-based authentication with role-based access control, persistent login across sessions, automatic token refresh, and bcrypt password hashing for customer and admin accounts.
- Built an end-to-end commerce flow including a server-persisted cart and wishlist with variant-level stock validation, a 3-step checkout supporting 3 payment methods (COD, Easypaisa, JazzCash), and an order system with auto-generated order numbers, atomic inventory deduction, and live status tracking.
- Developed an admin dashboard with sales analytics powered by 9 parallel MongoDB aggregations, product CRUD with a drag-and-drop Cloudinary uploader, and a verified review system enforcing one-review-per-user-per-product with auto-recalculated rating averages.
- Deployed complete NEXT.JS Application on Vercel [\[https://qasaf-clothing-brand.vercel.app/\]](https://qasaf-clothing-brand.vercel.app/)

StreamVault — C++ Console Streaming Platform | C++, OOP, Data Structures, File I/O

- Built a console-based movie streaming platform in C++ simulating core features of real streaming services, including user accounts, movie browsing, watch history, watchlists, and trending charts with disk-based persistence across sessions.
- Implemented a secure user system with sign-up, login/logout, session management, and persistent storage of user credentials and activity in flat files (users.txt, movies.txt).
- Engineered a stack-based watch history with an undo-last-watched feature, an array-backed personal watchlist for saving and removing titles, and a hash map for O(1) movie lookups by title.
- Designed a real-time trending system using a custom max-heap to rank the Top 5 movies by view count, updating dynamically every time a user watches a movie.
- Integrated core features around custom data structures: a **stack** for watch history with undo-last-watched, an **array-backed watchlist** for personal saves, and a **custom max-heap** powering a real-time Top 5 Trending ranking that updates on every view.

SOCIETIES & COMMUNITIES

- Google Developer Groups on Campus (GDGoC)

General Member | 2024 – Present

 - Participate in developer workshops and knowledge-sharing sessions focused on modern technologies and Google Cloud tools.
- Microsoft Learn Student Ambassadors (MLSA)

General Member | 2024 – Present

 - Attend Microsoft technology events and certification boot camps, deepening expertise in Azure and Microsoft developer tools
- AWS Cloud Club – University of Central Punjab (AWS UCP)

General Member | 2026 – Present

 - Engaging with AWS fundamentals, cloud infrastructure concepts, and hands-on lab sessions to complement MERN stack skills.

INTERESTS & HOBBIES

- Following AI/ML Research Trends
 - Cricket
- Reading Tech Blogs & Dev Documentation
 - Chess
- Football
